SUMMARY

PHP & Laravel Backend Developer with proven experience in high-scale production environments, including systems with 2M+ users. Skilled in RESTful API design, MySQL database management, and backend architecture. Demonstrated problem-solving ability through engineering a precise, error-free Artisan command to correct live production data discrepancies at scale. Thrives in remote, agile teams with a strong focus on performance, reliability, and clean code.

TECHNICAL SKILLS

- **Frontend:** HTML5, CSS3, JavaScript, jQuery, Tailwind CSS, Bootstrap, React.js, Alpine.js, Livewire
- **Backend:** PHP, Laravel, Livewire, RESTful APIs
- **Databases:** MySQL, SQLite
- **Cloud & Infrastructure:** Google Cloud, Nginx, Linux
- **Tools:** Git, GitHub, Composer, NPM, Postman, PestPHP

PROFESSIONAL EXPERIENCE

KRYSTAL DIGITAL SOLUTIONS

2025 – Present

Full-Stack Developer (Hybrid)

- Successfully spearhead the development and maintenance of 5 distinct web products, ranging from solo-led projects to large-scale team collaborations.
- Developed and executed Custom Artisan Commands to perform data sanitization and migration for over 2 million production records, utilizing chunking and database indexing to prevent server downtime; this reduced manual data correction time by 85% and ensured 100% data integrity
- Collaborated with Product Managers and Designers to translate complex requirements into scalable features using Alpine.js and Tailwind CSS.
- Architect and implement a multi-channel Notification Preference System, allowing users to customize their alerts via database, Mobile Push and email drivers using Laravel's Notification system.
- Lead the redesign of existing web modules, aligning them with current UI/UX trends which significantly improved user engagement by an estimated 20%.
- Conduct deep-level code refactoring and performance tuning to ensure seamless integration between Laravel backends and dynamic frontends resulting in a 10% reduction in server response time.
- Ensure application reliability by implementing automated testing suites using PestPHP, reducing production bugs and deployment risks.
- Manage application deployment and server health via Laravel Forge, ensuring high availability and seamless CI/CD workflows.

DARDAA WEB

2025 – 2026

Full-Stack Developer (Contract)

- Spearheaded the development of a full-featured agency platform from the ground up, streamlining the company's digital presence, recruitment, and lead generation capabilities.

- Designed a modern, responsive UI utilizing Tailwind CSS and Livewire Flux components, ensuring a premium and accessible user experience across all devices.
- Created an integrated recruitment pipeline, allowing administrators to post job openings and manage incoming candidate applications directly through the platform.
- Designed a flexible database structure to support multiple dynamic entities (Testimonials, Projects, Quotes, Jobs) ensuring high scalability for future feature additions.

LOWPRICEDATA

2023 – 2025

Backend Developer (Contract)

- Designed and implemented user-friendly frontend interfaces using HTML, CSS, Bootstrap CSS, and JQuery.
- Worked on the backend of the website using PHP, where I successfully integrated third-party API services for selling airtime, data, electricity payments, and cable subscriptions.
- Optimized RESTful APIs for data-driven applications, ensuring seamless interaction between the frontend and backend.
- Ensured API integrations were reliable, efficient, and met the necessary business requirements for various services offered.

PROJECTS

Ajolify (Digital Thrift Contribution App)

2026 – Present

- Led the end-to-end product lifecycle, from initial conceptualization and architecture to final production deployment.
- Integrated third-party APIs for secure payment processing and Twilio-based phone verification, ensuring robust authentication and financial transactions.
- Implemented database locking mechanisms to mitigate fraud risks and ensure integrity during user payment collection cycles.
- Engineered comprehensive authorization protocols to enforce granular access control and prevent unauthorized resource exposure.
- Developed a private group management system requiring invite-only access, incorporating admin approval workflows to maintain platform security and user privacy.

DevReport

2025 – Present

- **The Problem:** Development teams waste hours manually translating technical git commits into readable progress reports for stakeholders, leading to communication gaps and lost engineering time.
- **The Solution:** Engineered an automated reporting application using Laravel that syncs with code repositories to instantly generate human-readable changelogs and stakeholder updates.
- **Impact:** Eliminated the need for manual report generation, providing product managers and non-technical clients with a centralized dashboard for real-time development visibility.

EDUCATION/CERTIFICATE

Ladoke Akintola University of Technology

2025 - Present

Bsc. Computer Science

Obafemi Awolowo University

Graduated 2023

Bsc. Botany
